

ClaimSetu

Evidence-backed claim review for public health insurance

The Problem

```
graph TD; A[The Problem] --> B[High Volume Claims]; A --> C[Messy Packets]; A --> D[Manual Review Burden]; B --> B1[Is the packet complete?]; C --> C1[Does the timeline make sense?]; D --> D1[Is there enough evidence?];
```

High Volume Claims

- Large public-health claim volumes
- PM-JAY spans diverse infrastructure settings

Is the packet complete?

Messy Packets

- Scanned summaries, handwritten notes
- Lab reports, bills, and photos

Does the timeline make sense?

Manual Review Burden

- Review today is manual, inconsistent, and hard to audit

Is there enough evidence?

The Solution

- *ClaimSetu* converts messy claim packets into structured, evidence-backed review findings.
- It supports human reviewers - it does not approve or reject claims.
